

AGRO POWER

Application guide

Edition 1/2013

HIGH-TECH MACHINES REQUIRE HIGH-TECH DRIVE TECHNOLOGY

The company OPTIBELT has been manufacturing drive belts in the most diverse designs since 1948 – based on over one hundred years of experience in rubber processing. Due to constant investments in material research and production technology as well as to the increasing knowledge about the basic conditions which are linked to the various application areas, the performance limits of machines have been shifted via the advancement of the belts to the high-tech drive elements of today.

OPTIBELT AGRO POWER Quality belts made by OPTIBELT

Bigger, faster, further – extraordinary top performances have always fascinated people in all areas of technology. Again and again, engineers, scientists and researchers are going beyond the limits of feasibility.

However, what is it that drives us to develop something unique?

Why do we always want to be one step ahead of competition?

Our motivation lies in passion and precision. Brand-name products by OPTIBELT are an active investment protection for you.

As our drive belts stay invisible in your products, we add what is often missing elsewhere: responsibility and quality.

Day by day, we set examples with our top products, the OPTIBELT AGRO POWER series, and make sure that the best solution is implemented for every application. Everywhere around the world.

Passion
meets
precision

HOW WE GET OUR DRIVE

OPTIBELT is characterised by this passion for technology.

Every employee adds her/his special knowledge, enthusiasm, visions and initiatives for technological advance on the highest level. That you can be sure of!

No machines without drive technology. If you imagine the modern world without drive technology, there would not be much left operating. Without drive technology machines would be unthinkable. Drive technology makes sure that the primary power of an engine is transformed for diverse working processes and thus made usable. Here, it is most important that the power of the engine is adapted to the process with help of the functional elements.

First and foremost, the belts are the central and most efficient element of it all. They stretch almost all shaft distances at comparably low costs and low maintenance. And they achieve this without lubrication or guidance elements.

Thus, drive technology with belts is far superior to roller chain drives or spur wheel sections. The diverse application areas, their adaptability and economy have made belt drives become an essential part of mechanical engineering in all sectors.

HOW WE FOSTER OUR COMPANY VALUES

Internationally, OPTIBELT is highly estimated and represents excellent brand quality – made in Germany.

This rating is not least the result of our believe, as a family-run company, in our roots in Höxter and thus, in the location Germany.

In addition to that, the company history of OPTIBELT is closely linked with groundbreaking technical developments: from industrialisation to the automated world.

OPTIBELT has faced each of these milestones with clear sight and pioneer spirit.

This interaction of tradition and innovativeness characterises the key values of our company. For over 140 years now.

We are keeping our company philosophy even as a modern company: in our international distribution companies as well as in our production and service companies. Here, the training and further education is the key factor for the consistent quality that you can always expect from our products. Your advantage: We exceed the standards of our competitors by far and meet requirements such as just-in-time production, on-stock availability, customer proximity, support and flexibility with ease and commitment.

Because your drive drives us!

PROBLEMS – CAUSES – REMEDIES

Competency in drive technology

OPTIBELT Service Management

The best machine is of little value if it is not operated efficiently. The main objective has to be the optimisation of existing power drives.

The OPTIBELT Service Management offers a broad range of technologically demanding products. Service devices, thematic expert seminars and, last but not least, customised software solutions for drive design and optimisation complete the high-tech segment of OPTIBELT.

The operational life is of essential importance

Half of all drives achieve only between 50 to 70 percent of the estimated operational life; about 20 percent achieve a longer operational life whereas about a third of all drives only achieve 10 to 20 percent of the estimated time. The causes of drive problems are diverse. The biggest problem by far is improper maintenance of the drive; this applies to approx. 40 percent of all cases. An incorrect installation of the belts or the pulleys causes problems for 20 percent of the drives; the same percentage applies to negative external influences as the cause for drive problems. Furthermore, about 12 percent of the problems are due to an incorrect drive design and 4 percent each due to defective drive elements and improper storage or handling of the drive belts.

Optimise drives in theory and practice

Cost reductions can easily and quickly be achieved via simple but highly efficient tools. Simply use the technical equipment by OPTIBELT for trouble-free operation of the individual installation.

PROBLEMS – CAUSES – REMEDIES

V-BELTS

PROBLEM	POSSIBLE CAUSES	REMEDIES
	<p>Belt breaks after short running period (belt torn)</p> <ul style="list-style-type: none"> Forceful mounting, therefore, damaging the tension cord Drive blocked Ingress of foreign matter during operation Drive underdimensioned, insufficient number of belts 	<ul style="list-style-type: none"> Apply unforced mounting according to instructions Remove the cause Fit a guard Check drive conditions and remachine
	<p>Excessive wear on belt edges</p> <ul style="list-style-type: none"> Tension too low Starting torque too high Worn pulley grooves Wrong belt/groove section Wrong groove angle Pulleys do not align Small pulley diameter below recommended minimum 	<ul style="list-style-type: none"> Check tension and retension Check drive conditions and remachine Replace pulleys Adjust belt and groove sections Remachine or replace pulleys Align pulleys Increase pulley diameter (new drive design), use OPTIBELT special execution or OPTIBELT SUPER X-POWER M=S (SUPER TX)
 	<p>Cuts and splits at the base of the belt (brittleness)</p> <ul style="list-style-type: none"> Outside idler pulley in use the arrangement and diameter of which does not comply with our recommendations Abnormal belt slip Pulley diameter too small Ambient temperature too high Ambient temperature too low Chemical influences 	<ul style="list-style-type: none"> Remove protrusions or realign drive Note OPTIBELT recommendations, e.g. increase diameter. Increase size of existing idler. Use OPTIBELT RED POWER 3 or OPTIBELT special execution. Retension drive according to installation instructions. Check drive conditions and redesign, if necessary. Redesign using minimum pulley diameters. Use OPTIBELT special execution or OPTIBELT SUPER X-POWER M=S (SUPER TX) Ensure good ventilation, protect belts from direct heat. Use OPTIBELT XHR special execution (extra heat resistant) or use OPTIBELT SUPER X-POWER M=S (SUPER TX) or belt with aramid cord construction. Warm area surrounding drive and belt before use. Use OPTIBELT special execution. Protect drive from contamination. Use OPTIBELT special execution.

PROBLEMS – CAUSES – REMEDIES

V-BELTS

PROBLEM	POSSIBLE CAUSES	REMEDIES
	<p>Belt swelling or softening</p> <p>Contamination by oil, grease, chemicals</p>	<p>Protect drive from contamination. Use raw edge OPTIBELT SUPER X-POWER M=S (SUPER TX) or special execution "05". Clean pulley grooves with petrol or alcohol before using new belts!</p>
	<p>Belts turn over</p> <p>Wrong belt/groove section</p> <p>Pulleys do not align</p> <p>Pulley grooves severely worn</p> <p>Tension too low</p> <p>Excessive vibrations</p> <p>Foreign matter in pulley grooves</p>	<p>Realign belt and groove section correctly</p> <p>Realign pulleys</p> <p>Replace pulleys</p> <p>Retension drive</p> <p>Use inside idler pulley on drive slack side or OPTIBELT KB kraftbands</p> <p>Remove foreign matter and protect drive</p>

If further problems arise, contact our engineers from the applications engineering dept. Detailed technical data are necessary for specific assistance.

PROBLEMS – CAUSES – REMEDIES

RIBBED BELTS

PROBLEM	POSSIBLE CAUSES	REMEDIES
	<p>Unusual wear and tear of ribs</p> <ul style="list-style-type: none"> Tension too low Ingress of foreign matter during operation Pulleys do not align Pulleys defective Wrong rib/pulley section 	<ul style="list-style-type: none"> Correct tension Fit a guard Align pulleys Remachine or replace pulleys Align rib and pulley section
	<p>Break of ribbed belts after short running time (belts torn)</p> <ul style="list-style-type: none"> Ribbed belt slips or catches on protruding parts Drive blocked Drive overloaded Effects of oil, grease, chemicals 	<ul style="list-style-type: none"> Remove protruding parts; realign drive Remove cause Check drive conditions and redesign Protect drive from environmental influences
	<p>Cuts and splits in the ribs (brittleness)</p> <ul style="list-style-type: none"> Effects of an outside idler pulley the arrangement and diameter of which does not comply with our recommendations Pulley diameter too small Ambient temperature too high Ambient temperature too low Abnormal belt slip 	<ul style="list-style-type: none"> Comply with OPTIBELT recommendations, e.g. increase diameter; use an inside idler pulley on the drive slack side Ensure minimum pulley diameter Remove source of heat, protect belts from direct heat. Improve air ventilation. Warm up ribbed belt before use Retension drive according to installation instructions. Check drive conditions and redesign if necessary.
	<ul style="list-style-type: none"> Chemical influences 	<ul style="list-style-type: none"> Protect drive from contamination

If further problems arise, contact our engineers from the applications engineering dept. Detailed technical data are necessary for specific assistance.

PROBLEMS – CAUSES – REMEDIES

KRAFTBANDS

PROBLEM	POSSIBLE CAUSES	REMEDIES
	<p>Frayed, worn or damaged top of tie-band</p> <ul style="list-style-type: none"> Interference with guard Backside idler malfunction or damaged 	<ul style="list-style-type: none"> Check guard Repair or replace backside idler
	<p>Multiple belt comes off drive</p> <ul style="list-style-type: none"> Debris in pulleys 	<ul style="list-style-type: none"> Clean grooves. Use single belts to prevent debris from being trapped in grooves.
	<p>One or more ribs run outside of pulley</p> <ul style="list-style-type: none"> Misalignment Undertensioned 	<ul style="list-style-type: none"> Realign drive Retension
	<p>Tie-band separation</p> <ul style="list-style-type: none"> Worn pulleys Improper groove spacing 	<ul style="list-style-type: none"> Replace pulleys Use standard groove pulleys
